REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The previous examiner's rejection relied on Sasayama as the primary teaching. However, it doesn't appear that Sasayama teaches what the previous examiner alleges. In particular, although fig. 1 gives the impression that the reference electrode 12 extends beyond the reference channel, figure 2 (which is a perspective view of figure 1 (col. 1, lines 61 and 62)), appears to show that the reference electrode (excluding lead portions which the applicant does not consider to read as part of the electrodes themselves (see paragraph bridging pp. 8 and 9 of applicant's response of 1-26-2004)) only extends to an edge that appears to be roughly approximate to the edge of electrode 18. Electrode 18 does not appear to extend beyond the reference gas passage (fig. 1) and therefore it is unclear that electrode 12 would either, especially absent any particular written suggestion in the reference of doing so. In addition, even if the electrode 12 could be reasonably interpreted as extending beyond the borders of the reference channel, there is no suggestion in Sasayama of having less than 90% of that electrode be in contact with the reference gas passage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Neumann (USP 6,666,962 B2) is relevant, but does not qualify as prior art under 35 U.S.C. 102.
